

ClubUML Extension Ideas

Program Infrastructure

- Work with Northeastern University Computer Center to host the release version of ClubUML on a Northeastern Server
- New enhancements and bug fixes will be developed and tested locally but then incorporated into the release build through CM and pushed to the hosting server

Bug Fixes

- Gain access to previous semesters issue tracking and prioritize bugs
- Work down high priority bugs in the system
- Exceptions noticed when running through Eclipse, document and correct issues that are causing runtime exceptions

Updated User Account Management

- Ability to change user passwords
- Ability to change user account email addresses
- Ability to change user security questions
- Reset capability for forgotten passwords
- Read only (guest) user
 - Able to view project and diagrams but unable to make any changes to the project

Rationale History

- Track the decisions that led to the current decision and have this accessible to the user in the form to a report
- Will allow the user to know what specific decisions have led to the current state

Bulk Diagram Upload

- Allow the user to upload multiple UML diagrams to ClubUML at a single time
- User will choose a single context that will apply to all diagrams uploaded through bulk upload
