Author: Yang Zheng

The following is the use case and corresponding scenario I propose as extensions to the project of Fall 2013 classes.

Use Case: View Diagrams
Brief Description: This use case let the user to view all uploaded diagrams of a project and comment each diagram.
Actor
   User
Preconditions
1. The user is logged in to ClubUML.
2. The user has been assigned to at least one project
3. The project has at least one diagram.

The Basic Flow of Events
1. The use case begins when the user select a particular project and click the "View Diagrams" button
2. ClubUML displays the first diagram in the browser for the user to view and comment and also the comments of other users on the diagram
3. The user inputs some comments and clicks "submit comment" button.
4. ClubUML stores the user's comments in the database and display a dialog box to tell the user the result of the operation
5. The user clicks the next diagrams button.(The user can make no comments)
6. ClubUML shows the next diagram associated with this project and the comments on it.
7. The user clicks "Return" button to return to exit the view diagrams functionality.
8. The use case ends successfully.

Scenario: View Diagram
Actor
   Mike: **User**
The Basic Flow of Events
1. Mike selects the "Vocabulary Builder" project and click the "View Diagrams" button
2. ClubUML displays the first diagram in the browser for Mike to view and comment and also the comments of other users on the diagram
