Author: Bing Li
Course: CSYE 7945 Software Engineering Project

Use case: Adding online discussion board
Actor: user
Precondions:
User logged into the system.
The policy manager established a discussion forum.

Flow of event:
1. This use case begins when the user select discussion forum that belongs to a particular project.
2. The user writes his opinion or comments for the project in the forum.
3. After the user finished his writing, he can press "Send" button, then the message was sent into the forum.
4. Other users who go to the forum can read what the user written after he sent his message.
5. Other users can write other comment to respond to his message. (They can make no comments to this message if they have nothing to say)
6. The ClubUML system saves all messages from users, then the users can check the talking history anytime.
7. The user clicks the "Out" to exit the discussing and goes out to the home page.
8. The use case ends successfully.
